The Cambridge Handbook of English Corpus Linguistics checks surveys the breadth of corpus-based linguistic research on English, including chapters on collocations, phraseology, grammatical variation, historical change, and the description of registers and dialects. The most innovative aspects of the book are its emphasis on critical discussion, its explicit evaluation of the state of the art in each sub-discipline, and the inclusion of empirical case studies. While each chapter includes a broad survey of previous research, the primary focus is on a detailed description of the most important corpus-based studies in this area, with discussion of what those studies found and why they are important. Each chapter also includes a critical discussion of the corpus-based methods employed for research in this area, as well as an explicit summary of new findings and discoveries.

Collocation is an important tool in describing lexical behaviour in language and has received increasing attention in recent years. Based on two corpora, LOCNESSE (the Louvain Corpus of Native English Essays) and MLC (the Non-English Major Mainland Chinese Learner Corpus), this book explores the features of Chinese learner English with analysis of grammatical and lexical collocations. The findings show that Chinese university students use collocations with considerably less variety and Chinese language and culture exert a substantial influence on their English writing. It also discusses ways to tackle the problems Chinese English learners face and the pedagogical implications for teaching English and learning English. Collocations: As one of the first systematic studies to investigate collocations in Chinese learner English based on learner corpora, this book not only analyzes how Chinese learners use collocations in their English writing but also provides significant implications for foreign language teaching and learning.

The issue of differences between translational language and native speaker language has become a topic of increasing interest in linguistics and translation studies. One of the primary tasks in this research area is to employ a corpus approach and analyse collocations with authentic language data by comparing comparable corpora consisting of translated and native speaker texts. Collocation in linguistics and translation studies refers to the relationship of co-occurrence between lexical items. The book shows that examining the use of collocations constitutes an integral part in assessing the naturalness of second language (L2) use and therefore can be a valid measure to make a distinction between translational language and native speaker language. Nevertheless, the role of collocation has not been given enough attention or discussed systematically in translation studies and to date there

are hardly any translation theorists who have clarified the mechanism of collocation in its by which translators acquire receptive and productive knowledge of collocations in their L2 in addition previous research in this area is largely confined to Indo-European languages resulting in a lack of empirical evidence involving Asian languages this book therefore attempts to bridge the gap in the literature and constitute an integral part in the research area

Cross-disciplinary approaches to the English language theory and practice provides an overview of a less-tackled field of research, namely the main issues at stake when teaching English language and culture in Romania. The approach is an interdisciplinary and cross-cultural one as the authors investigate problems offering and probing solutions from a cross-curricular perspective. The book is a collection of 10 contributions by teachers and researchers from Romania which draw on theoretical and applied methodological explorations into the challenges posed by teaching/learning English in a globalised context. Organised into three main chapters, the volume addresses the multifacetedness of language education as a cross-discipline. The complexity and universality of the research enquiries and practical insights make the topics addressed valid across the contemporary globalising educational context. Cross-disciplinary approaches to the English language theory and practice will be a useful tool to specialists and practitioners from ESP and CLIL domains alike as well as graduate and postgraduate students in foreign language teaching.
